

## Audi Reference Letter

Audi, among others, is using Absolent's oil mist- and oil smoke filters in its new engine-block and engine-parts facility in Győr, Hungary. Audi chose Absolent because it is economically and technically an advantageous solution for its high-speed and high particle-load metalworking technology using Minimal Quantity Lubrication (MQL).

Absolent filters have been running at the Győr facility for over a year, without any maintenance, providing clean air in the facilities with the possibility of heat-recovery, and also contributing to efficiency in production, by minimizing the down-time.

Audi is satisfied with Absolent and their local distributor, Pure Air.
